

29 x 29 blank practice grid

A4 | 210 x 297 mm paper | nominal 5 mm cells

Print: Actual size / 100%. Turn off Fit, Shrink and borderless enlargement.

Use matching paper, portrait orientation and one page per sheet. Prefer the PDF.

29 cells = 145 mm; first-to-last cell centres = 140 mm.

Measure both axes on the printed sheet
with a separate ruler, centre to centre.

Before using the grid

If either ruler is not 50 mm, check paper size and scaling, then print again.

If content is clipped, use a printer that can print this area; do not scale to fit.

If both rulers match, compare cell centres with your actual peg spacing in both axes.

If pegs do not align, use row/column counting. This is not a universal pegboard template.

Digital dimensions checked; physical printing and pegboard fit have not been tested.
